DETAILED ACTION

1. ***Claim Rejections - 35 U.S.C. § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-4, 7-11, 14-17, 20-22, 30-32, 35-37 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gilli '229.

Gilli discloses receiving raw data comprising atrial and ventricular sensing. The detected signals 23 and 33 are synchronous for a normal beating heart. Microprocessor 19 senses the synchronous heart signals on lines 45 and 49 and separates the asynchronous component, an arrhythmia and based on the detection and data manipulation provides either an atrial or a

ventricular pace process. The examiner is interpreting a lossy process to comprise sending a pacing pulse and a lossless process to comprise not sending a pacing pulse.

4. ***Claim Rejections - 35 U.S.C. § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 25, 26 and 40-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al '245.

Lee et al disclose receiving raw data comprising sensing an ECG signal on electrodes 61a and 61b and separating the asynchronous component, an arrhythmia and selecting, and teaches the nature of the data compression is based on the requirements of the medical device. One of ordinary skill in the art would have found it obvious to select a data compression scheme based on the data condition because Lee et al teach storing sampled amplitude readings of the electrogram signal, and using a lossy compression scheme whereby some amplitude measurements are stored, and some intervening measurements are not.

6. *Allowable Subject Matter*

7. Claims 5, 6, 12, 13, 18, 19, 23, 24, 27-29, 33, 34, 38, 39 and 44 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
